

## Investigating product labels

### Activity

a) As a homework activity ask the students to:

1. Investigate eight products at home

Some of the items they could investigate could include:

- product labels on cleaning products, clothing, children's nightwear, toiletries, cosmetics
- labelling on any product, eg, heater, microwave.

2. Complete the **Product label inquiry** chart by ticking all correct category boxes.

3. Choose one label and make a copy of it to bring to class.

Talk to the students about asking for permission to examine products and about using caution when examining household products.

b) Discuss the findings of the product label inquiry.

c) Use the categories to classify the copies of labels students have brought from home, and make a wall display of these labels under these headings.
